From: Rene Meyre
Subject: indorr air quality

gray has been here with terry wyatt and we had a very useful and interesting meeting.

the concept has been well established, we will proceed as follows:

gray will make contact with halton and find a representative who will visit us to discuss detail diffuser requirements and for halton to provide quotations.

terry will establish a summary of our meeting, providing key elements and applicable numbers and send it to us.

we will update our existing drawing, establish all performance numbers and cost figures and write a draft of the 650 (budget request) including the project brief. (responsible: w. amsler)

this document will be made available to gray and you to insure that technically as well politically all has been treated correctly. once agreed the budget request will be submitted.

we are planning during september to have a base line air-quality test made in the reception center, with a occupation of about 40 people for 2 hours. r. meyre will inform gray at least one week before of a suitable date.

we are looking forward to realize this project.
